BONDED INTERNET SERVICES

FIXED-SITE BONDED INTERNET

By bonding connections together from multiple sources, Comms365 is able to provide a faster and more reliable Internet connection.

Using Software-Defined Networking (SDN) technology, Bonded Internet is achieved when multiple connections are effectively combined into a single, aggregated connection to deliver greater download and upload speeds and increased reliability. Customers can bond virtually any type of connection from multiple carriers including 3G, 4G, FTTC, Ethernet, or any combination of these.

THE CHALLENGE

Fixed-Site Bonded Internet is designed as a solution for businesses who require a higher performance, resilient Internet connection with Quality of Service as standard.

Challenges arise when fixed line solutions are problematic or unavailable. Connections may be performing poorly or your network needs to be upscaled securely to keep up with business growth and demands.

THE SOLUTION

SD-ONE delivers Quality of Service (QoS) using SDN Technology to bond up to three connections across any ISP connection, including 4G to provide high performing Bonded Internet.

SD-ONE optimises Internet performance, provides resiliency to your connection and allows you to prioritise network traffic. It is carrier grade and network agnostic, providing the best possible service and guaranteeing continued network access without any interruption.

USE CASES

Business Growth

SD-ONE can bond multiple connections to provide secure, faster, more reliable Internet that meets your growing demands.
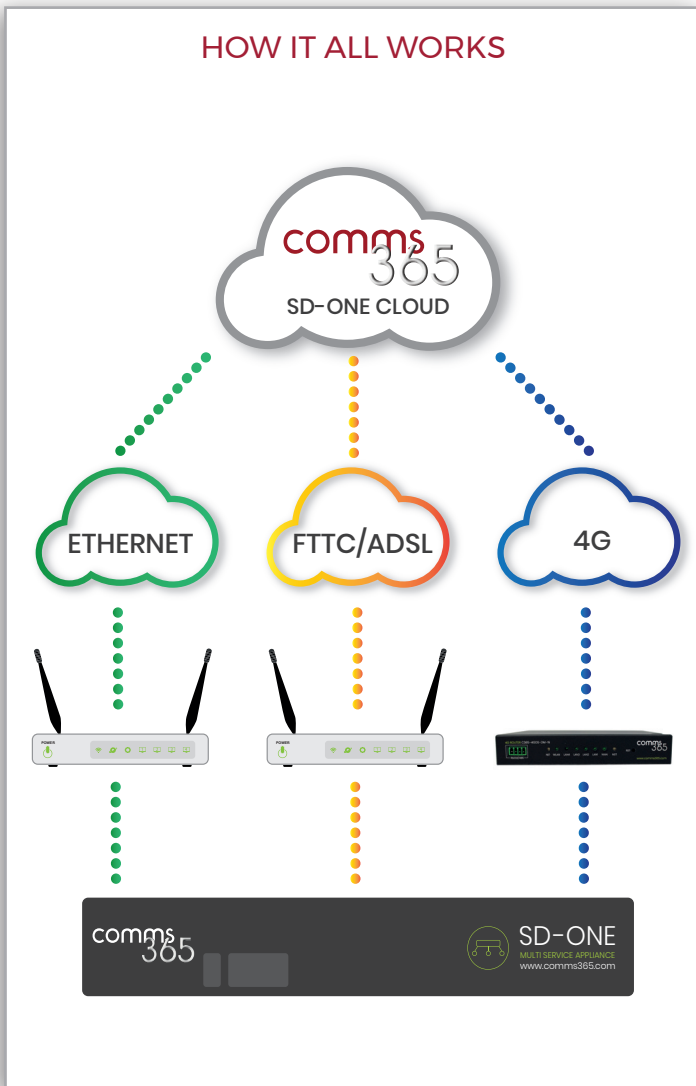

Support VoIP and UC

SD-ONE provides QoS as standard, enabling you to select and prioritise traffic over the network for your critical applications.

Cloud Based Applications

SD-ONE provides instant access to cloud services from the Internet without any interruption.

HOW WILL OUR SERVICES SUPPORT YOU?

Collaboration
Bonded Internet improves performance to support document sharing, video calls, team working and adding remote workers.

Security
SD-One creates a highly secure private network using encryption making your business network and data safe and secure.

Resilience
Build in resilience to ensure you have business continuity by bonding across multiple carriers including fixed line and 4G.

Increase Productivity
By providing Internet connectivity with improved performance for more uptime and less interruption.

Connect Locations
Securely connect members of the team including those working from home or in different offices.

Monitoring
Monitor your connections using CommsPortal and monitor your data traffic flow using SD-One.

FEATURES OF SD-ONE

Feature	Failover Package 1	Bonding Package 2	SD-WAN Package 3
Static IP Delivery	✓	✓	✓
Resilent Failover	✓	✓	✓
User portal	✓	✓	✓
Carrier agnostic	✓	✓	✓
Upgrade Path	✓	✓	✓
Aggregated Bonding		✓	✓
QoS		✓	✓
Multiple private WAN			✓

COMMSPORTAL

Our Services Management Platform, CommsPortal allows users to view granular data usage from each and every connection and device on their estate, compare usage between months and run reports. With a secure login you can manage your estate, place your orders or raise a support ticket all on one portal.
